

Experience and in-depth expertise in energy generation

Power Generation Worldwide –
Case Study Power Generation

Desponia® butterfly valves

Elastomer-lined, for general applications up to 16 bar

Desponia® plus butterfly valves

Elastomer-lined, for general applications up to 20 bar

Bianca butterfly valves

PTFE-lined, for highly corrosive applications

Ball valves

2 and 3 way

Actuators

manual or pneumatic

InterApp has an impressive list of customer references. The following plants are just a few examples: Ruien in Belgium, Tusimice in the Czech Republic, Trbovlje in Slovenia and Pontnow-Adamow-Konin in Poland, Pfaffenau and Wels in Austria, Rugeley and Fiddlers Ferry in Great Britain and Sugan in India.

Power plants require specially tailored solutions for their applications such as boiler feed water treatment and dry or wet flue gas cleaning. InterApp has been active in power generation and other highly demanding applications for many years and has a sound understanding of the requirements. Various installations all over Europe have increased the company's experience in this field.

Power plants are all very different. Each application requires other solutions to fulfill the engineering and investors' needs. Sound knowledge into the different processes is the basis on which an optimum installation can be developed. Power generation applications have many aspects to take into consideration. Chlorine load in flue gas desulfurisation, abrasion in lime suspension and assurance of the temperature level in the absorber entry are just a few examples.

In cooperation with engineers at the systems engineering company and at the power plant operating company, the engineers at InterApp design a high-performance installation, using the appropriate materials and types of valves. Operational safety, reliability and the quick availability of wear parts are required. InterApp offers a complete package and develops cost-effective solutions.

The main benefits are the broad experience and sound knowledge of our specialists, the wide range of products and accessories, the durability and performance of the valves, and – last but not least – the expertise, the reliability and dedication of the people at InterApp.

Desponia® plus, EPDM-lined butterfly valve and Bianca, PTFE-lined butterfly valve

We are there for you. With our global expertise in industrial applications, we understand your requirements and offer expert advice at every stage of your project. At the same time, you can benefit from our international product standards thanks to our global know-how. Our highly skilled technical team, coupled with the quality and durability of our products, makes us a reliable partner for industrial valve solutions.
